Neutronic Consequences for Parameters Perturbation at the Jordanian Subcritical Assembly

Authors: Alsabbagh, A., M. Al-Dbissi, E. Smadi, L. Khalayleh

Abstract: A detailed 3D Monte Carlo N-Particle (MCNP) model was developed based on reactor design parameters. Criticality and reactor physics calculations were performed using MCNP5 Monte Carlo code, to understand the current configuration of the facility and predict the effect of any changes to the configuration .
